

ProtectPlus™ Certification

What is ProtectPlus™ certification from Zeager? It's quality assurance on steroids. Why ProtectPlus™? Since conditions in the field are rarely ideal, we believe you should have a playground surface that will perform better than the minimum requirements. ProtectPlus™ is us holding our playground surfacing products to a higher standard.

20% Fall Safety Margin: ProtectPlus™ requires that our playground surface products provide impact attenuation results that are at least 20% better than what's allowed in the Fall Safety standards. Below is a comparison of what that means in terms of injury statistics.

Above info is based on information from NHTSA, Department of Transportation., 1997, FMVSS201, Head Impact Protection, 49 CFR 571.201.
» Prasad, P. and Mertz, H. J., "The Position of the United States Delegation to the ISO Working Group on the Use of HIC in the Automotive Environment," SAE Paper No. 851246, Society of Automotive Engineers, Warrendale PA, 1985.

Additional testing: ProtectPlus™ includes testing for Flammability and Accessibility along with the Fall Safety and Engineered Wood Fiber testing.

Why settle for a surface that barely passes safety standards? If you choose to use WoodCarpet® products, ask your WoodCarpet® representative for a ProtectPlus™ certificate for your project.
